

Package ‘compareDF’

March 12, 2022

Type Package

Title Do a Git Style Diff of the Rows Between Two Dataframes with Similar Structure

Version 2.3.3

Date 2022-03-11

Description Compares two dataframes which have the same column structure to show the rows that have changed. Also gives a git style diff format to quickly see what has changed in addition to summary statistics.

compare_df	<i>Compare Two dataframes</i>
------------	-------------------------------

Description

Do a git style comparison between two data frames of similar columnar structure

Usage

```
compare_df(
  df_new,
  df_old,
  group_col,
  exclude = NULL,
  tolerance = 0,
  tolerance_type = "ratio",
  stop_on_error = TRUE,
  keep_unchanged_rows = FALSE,
  keep_unchanged_cols = TRUE,
  change_markers = c("+", "-", "="),
  round_output_to = 3
)
```

Arguments

df_new	The data frame for which any changes will be shown as an addition (green)
df_old	The data frame for which any changes will be shown as a removal (red)
group_col	A character vector of a string of character vector showing the columns by which to group_by.
exclude	The columns which should be excluded from the comparison
tolerance	The amount in fraction to which changes are ignored while showing the visual representation. By default, the value is 0 and any change in the value of variables is shown off. Doesn't apply to categorical variables.
tolerance_type	Defaults to 'ratio'. The type of comparison for numeric values, can be 'ratio' or 'difference'
stop_on_error	Whether to stop on acceptable errors on not
keep_unchanged_rows	whether to preserve unchanged values or not. Defaults to FALSE
keep_unchanged_cols	whether to preserve unchanged values or not. Defaults to TRUE
change_markers	what the different change_type nomenclature should be eg: c("new", "old", "unchanged").
round_output_to	Number of digits to round the output to. Defaults to 3.

create_output_table *Create human readable output from the comparison_df output*

Description

Currently 'html' and 'xlsx' are supported

Usage

```
create_output_table(
  comparison_output,
  output_type = "html",
  file_name = NULL,
  limit = 100,
  color_scheme = c(addition = "#52854C", removal = "#FC4E07", unchanged_cell =
    "#999999", unchanged_row = "#293352"),
  headers = NULL,
  change_col_name = "chng_type",
  group_col_name = "grp"
)
```

Arguments

comparison_output	Output from the comparison Table functions
output_type	Type of comparison output. Defaults to 'html'
file_name	Where to write the output to. Default to NULL which output to the Rstudio viewer (not supported for 'xlsx')
limit	maximum number of rows to show in the diff. >1000 not recommended for HTML
color_scheme	What color scheme to use for the output. Should be a vector/list with named_elements. Default - c("addition" = "green", "removal" = "red", "unchanged_cell" = "gray", "unchanged_row" = "deepskyblue")
headers	A character vector of column names to be used in the table. Defaults to colnames.
change_col_name	Name of the change column to use in the table. Defaults to chng_type.
group_col_name	Name of the group column to be used in the table (if there are multiple grouping vars). Defaults to grp.

`create_wide_output` *Convert to wide format*

Description

Easier to compare side-by-side

Usage

```
create_wide_output(comparison_output, suffix = c("_new", "_old"))
```

Arguments

`comparison_output` Output from the comparison Table functions
`suffix` Nomenclature for the new and old dataframe

`results_2010` *Data set created set to show off the package capabilities - Results of students for 2010*

Description

A manually created dataset showing the hypothetical scores of two divisions of students

- Division The division to which the student belongs
- Student Name of the Student
- Maths, Physics, Chemistry, Art Scores of the student across different subjects
- Discipline, PE Grades of the students across different subjects

Usage

```
results_2010
```

Format

A data frame 12 rows and 8 columns

results_2011	<i>Data set created set to show off the package capabilities - Results of students for 2011</i>
--------------	---

Description

A manually created dataset showing the hypothetical scores of two divisions of students

- Division The division to which the student belongs
- Student Name of the Student
- Maths, Physics, Chemistry, Art Scores of the student across different subjects
- Discipline, PE Grades of the students across different subjects

Usage

```
results_2011
```

Format

A data frame 13 rows and 8 columns

view_html	<i>View Comparison output HTML</i>
-----------	------------------------------------

Description

Some versions of Rstudio doesn't automatically show the html pane for the html output. This is a workaround

Usage

```
view_html(comparison_output)
```

Arguments

```
comparison_output  
output from the comparisonDF compare function
```
